### Installation Schematic

\* Make sure POWR3 be connected to the back of the air switch, instead of the grid directly.

### Normally Closed Relay

POWR3's relay is normally closed, which means the relay remains closed when there is no power applying or the device is damaged. Even if the POWR3 is damaged, the circuit is not affected. Other products' relays are normally open. Of course, the power-on status can be set on, off, or hold through the APP.
